Hydronic Baseboard Anti-Freeze Option

Dear Service Contract Customer,

If you have a hydronic (boiler/baseboard) heating system, one of your options is to add anti-freeze solution to the system. We can add anti-freeze to manufacturer's recommendations at the time of your annual service plan maintenance cleaning. This is a billable option, including labor and would not be applicable to any hot air furnace systems or space heaters.

If you live in your home full time, or your home is regularly monitored, you may not wish to have anti-freeze, however this is a reasonable option for a home which is unoccupied for long periods of time. Antifreeze is a protector, however it is corrosive and can cause issues with the heating system over time. If you choose to enlist in this program to add anti-freeze, we will do so at the time of the annual cleaning.

White Mountain Oil and Propane will not automatically add anti-freeze to any system without this letter signed and returned to us.

- Yes, I request White Mountain Oil and Propane anti-freeze my hydronic heating system at the time of my annual service plan maintenance cleaning. I understand there will be an additional charge to this service.
